

4impact Data Extraction and Reporting Solutions: Mutual Banking

You can now access all of your traditional core banking platform data to help unleash your inner digital bank.

Your core banking Data is one of your organisations most valuable assets, the problem is that it's often locked away.

4impact can now give you access your Pick databases by utilising our purpose-built 'pick' data extraction engine.

We will liberate and expose your restricted core banking platform data allowing your business to leverage its greatest asset for growth and increase operational efficiencies, whilst accelerating the time-to-report.

If your business currently relies on heavy-lifting and the time consuming task of manually pulling and recomposing your core banking data to make it accessible and trusted, then let's chat.

Core Platform Data Extraction provides:

- Access to ALL of your traditional core banking platform data
- Make your data available across your business systems
- Enable customer 360 view (golden record).
- Faster access to reporting data from days to hours with near real-time data at your fingertips.

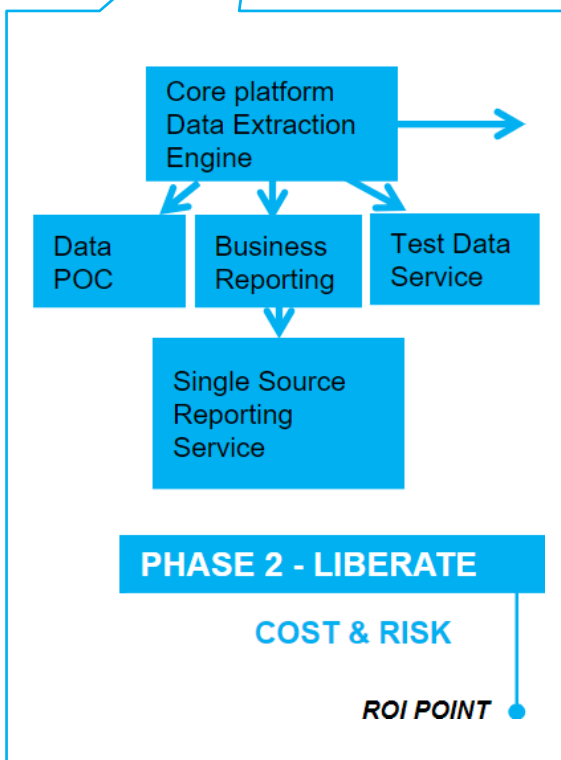

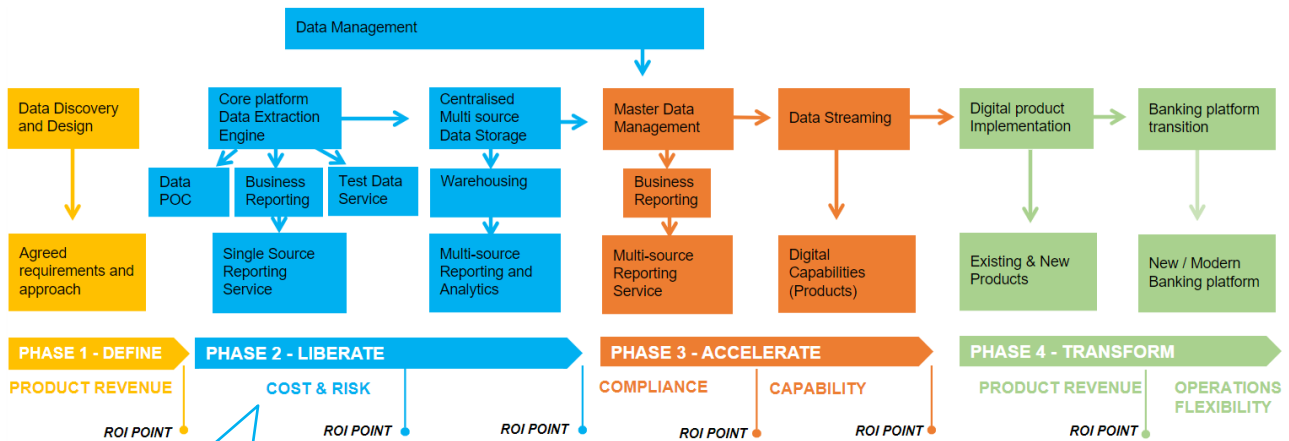

Operational Reporting services:

Gain instant value from "Liberating" your data with automated reporting, including:

- Daily Lending Report
- Sales Pipeline Report
- Member Dashboard
- Monthly Reports
- Quarterly Reports
- Collection Portfolio Report - Monthly.

Data & Digital Transformation Roadmap

4impact provides a 4 Phased approach to digital banking transformation starting with defining your *data approach*. This ensures that all efforts and investments are supported with ROI points along the way.

Banking organisations who are utilising legacy systems can now easily extract and access all of their data to perform critical business tasks such as detailed data analysis and a wide range of operational reporting.

4impacts Data Extraction solution is a region-built fully managed service.

To access and extract traditional core banking platform data we utilise a region-ready data extraction tool built specifically to access legacy databases. This ensures you get the best out of your data to perform critical business tasks such as detailed data analysis and reporting. The service is delivered as a managed service which means no strain on your current FTE cost or efforts.

Our Operational Reporting service will save you valuable time and resources while reducing risk.

Having access to and liberating your high-value legacy core banking data will deliver significant and instant business value, and allow you to reduce both the time and cost of reporting through automations whilst increasing accuracy.

“Unleashing your inner digital bank starts with accessing your high-value core banking data, let’s talk.”
